POWER INPUT: 3xAA, switch, reverse-polarity PMOS

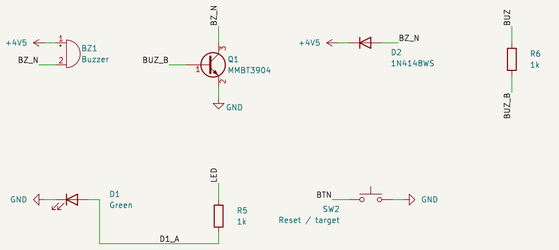

MCU: ATmega328P-AU, wakes on flow pulses

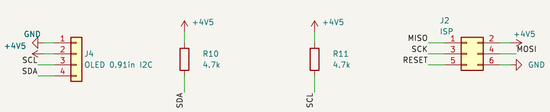

FLOW SENSOR INPUT (hall, 3-wire)

ALARM, LED, BUTTON

DISPLAY (OLED I2C) + PROGRAMMING

Flow sensor must be a 3.5–24 V type (e.g. YF-S201C class) because 3xAA falls to about 3.6 V; pulses per litre (about 450) are calibrated with a 10 L bucket. SIG is pulled up by R9 and filtered by C9.

First engineering release; see pcb/README.md for status and limits
