costing_BOM_COSTS

Priced bills of materials (parts, live LCSC list prices)

Generated 2026-11-02 by `utility10/pcb/costing.py` from each board's `2_assembly/*_BOM_full.csv` and the LCSC product API. USD list prices, ladder price for the quantity bought; INR at an assumed **88 INR/USD**.

What is and is not in the numbers: parts only. Not included: bare PCB fabrication, assembly fees (setup, extended-part fees, placement), stencil, shipping, import duty and GST, cell/battery, enclosure, bought-in modules and cables. Planning figures for PCB and assembly are shown separately and are assumptions, not quotes: get a JLC quote before you order. Stock is as returned by LCSC on the run date and changes daily.

Summary: parts cost per assembled board

Board	Lines	Parts	1 board USD	1 board INR	10 boards (each) USD	100 boards (each) USD	100 boards (each) INR	PCB fab planning (per order of 5)	Stock flags

Per-board file: `costing/<board>_priced_BOM.csv` (every line with LCSC number, unit price, stock).

Stock flags (fewer than 100 boards' worth in stock, or zero)

- **rain**: C19224 TVS 5V bidir (low stock, stock 175)

Planning assumptions (not quotes)

- PCB fabrication: about US2(*small*)*toUS*8 (large) per order of 5 boards at a standard 2-layer, 1.6 mm spec; ENIG, 2 oz copper or other options cost more.
- JLC assembly: about US$8 setup per order plus per-part placement and a per-unique-part fee for extended parts; with many unique parts this can exceed the parts cost for 1 to 10 boards.
- Through-hole connectors listed as hand-soldered are in the parts total but not in the assembly fee.
